

Nifty 100 Analyst Guide

The Nifty 100 platform provides data quality, screening, peer analytics, cash-flow intelligence, valuation, clustering, REST API, and PDF reporting workflows.

Nifty 100 Analyst Guide - Section 2

Screener usage: choose a preset or apply ROE, leverage, cash-flow, growth, margin, valuation, and coverage filters. Results can be exported as CSV.

Nifty 100 Analyst Guide - Section 3

API quick start: `curl http://localhost:8000/api/v1/health`

Nifty 100 Analyst Guide - Section 4

API company profile: `curl http://localhost:8000/api/v1/companies/N100001`

Nifty 100 Analyst Guide - Section 5

API history: curl

"http://localhost:8000/api/v1/companies/N100001/pl?from_year=2019&to_year=2024"

Nifty 100 Analyst Guide - Section 6

PDF generation: run the tearsheet, sector, and portfolio generators from the reports package.

Nifty 100 Analyst Guide - Section 7

Clustering: KMeans uses standardized profitability, leverage, growth, cash-flow, and margin features; inspect cluster_labels.csv and outlier_report.csv.

Nifty 100 Analyst Guide - Section 8

Troubleshooting: confirm DB_PATH, run the ratio and peer population jobs, and inspect validation_failures.csv.

Nifty 100 Analyst Guide - Section 9

Operational checks: use the health endpoint, verify report file sizes, and rerun pytest with the HTML reporter.

Nifty 100 Analyst Guide - Section 10

Sign-off checklist: database, analytics, API, reports, tests, documentation, and archive outputs are checked for completeness.
